CONTENTS:

1. Purpose
2. Main Page
3. Types of Signals
4. How to set up your Auto Trading System
5. Trade History – Active and Previous Trades
6. Signal Results

01. PURPOSE

Blockchain Education has introduced a new auto trading system. Our main purpose is to provide our members a unique, advanced, Trustworthy and an accurate auto trading system to earn more money from crypto currency. The New advanced auto trading system will gives an unmatched experience to our members and help our valued members to earn money even while they are at sleep. All you need to do is configure your trading, wait and get the results. The system will grab all the good opportunities and trade for you.

All our signals are made by top qualified, highly successful, experienced technical crypto analysts along with our proprietary algorithmic systems developed by our tech team. The system will analyze the market 24/7 and will grab the most accurate opportunities and post to our auto trading system. We have a proven track record over a period of more than 2 years in the industry and our success rate is more than 90%.

02. MAIN PAGE

The main page will give you all the signal types and from this page you can go to each and every signals page and select the coins that you need to trade and set up your trading as you preferred. BCE has included various signals categories in order to maintain an easy and advanced system at the same time.

MAKE CONSISTENT PROFITS WITH OUR SIGNALS

All our signals are made by top qualified, highly successful, experienced technical crypto Analysts along with our proprietary algorithmic systems developed by our Tech team. We have a proven track record over a period of more than two years in the industry and our success rate is more than 90%.

CAT TRADING SIGNALS

03. TYPE OF SIGNALS

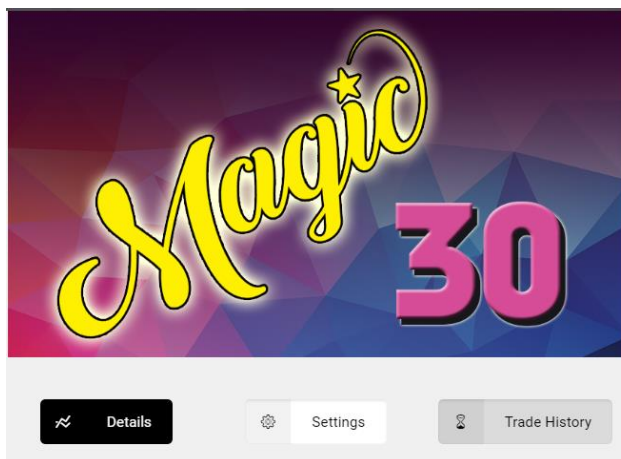

HOT SIGNALS - The "Hot" signals are fully automated and are normally ready for a manual entry, immediately upon release.

SHORT TERM SIGNALS - The "scalping" or short term signals will normally need some TA done with them to usually find a lower buy zone, based on former support levels and with scalping calls, the trader is normally going for about 1 to 2 percent and for up to 4 days.

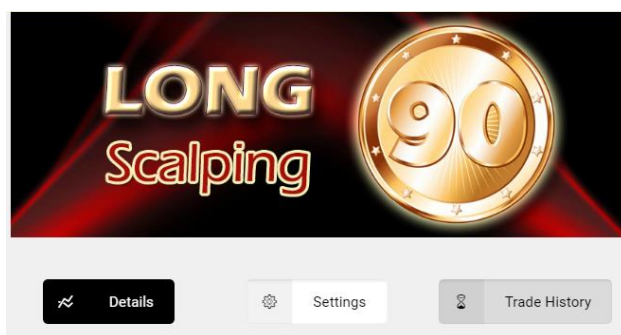

MEDIUM LONG-TERM SIGNALS - The medium long term signals require some TA done and these signals are for the longer run. These signals are valid up to 14 to 20 days.

THE OFFICIAL CALLS - The "official" calls which are made by the analyst team.

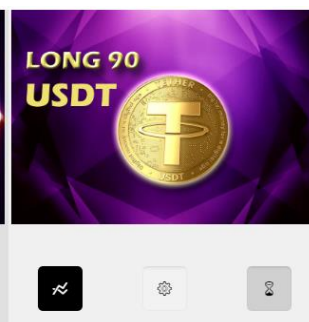

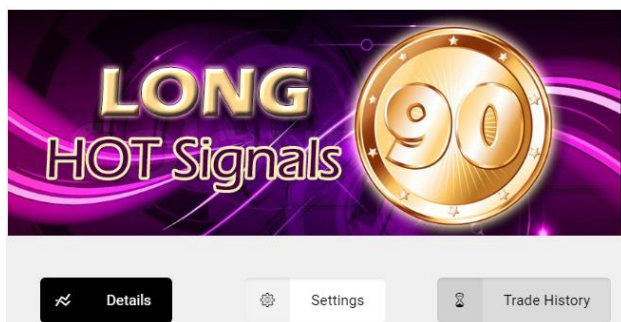

MAGIC 30 AND WARREN BUFFETT 100 - The Signals that are made hourly depending on the market.

TRADE LONG90 SCALPING - We have also included a Long Scalping pairs section which includes all the trading pairs and you could trade BTC or USDT, coin pairs. The Long 90 is based on our mythology and is a filter of Short-term signals.

TRADE LONG90 HOT SIGNALS - We have also included a Long Hot pairs section which includes all the trading pairs and also you could trade BTC or USDT, coin pairs. The Long 90 is based on our mythology and is a filter of Hot signals.

TOP TEN USDT PAIRS - The top ten USDT pairs which are mostly trade in the market. We have filtered the top ten coins in order for you to get into the good entries with ease.

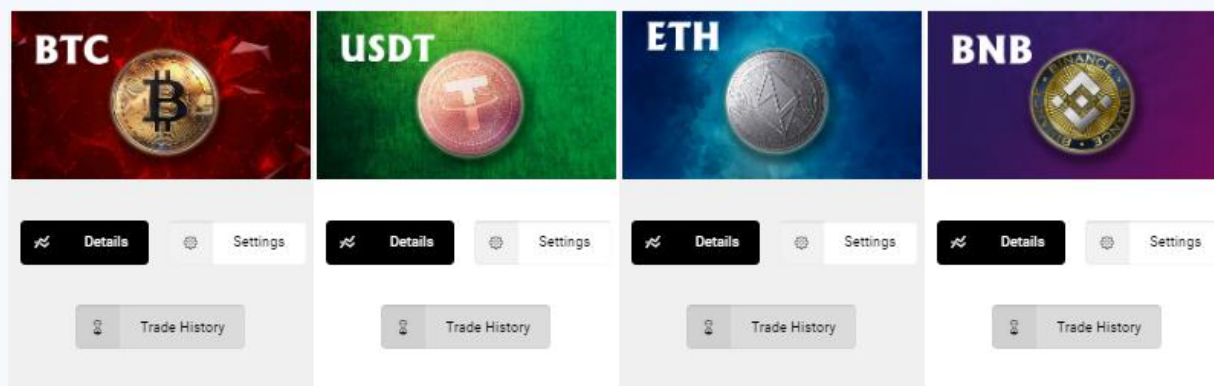

TRADE TOP 10 USDT PAIRS

TRADE MAIN PAIRS - We have also included a main pairs section which includes BTC, USDT, ETH and BNB coin pairs.

TRADE MAIN PAIRS

04. HOW TO SET UP YOUR AUTO TRADING SYSTEM

In order to activate the auto trading system, you need to activate your 2FA for Blockchain Education.

Go to the dashboard> My Accounts> Two factor authentication and set up. We have included a document that you can refer if you need instructions. You can also download the pdf file from here.

<https://blockchaineducation.com.au/downloads/>

Contact Us Today: support@blockchainfinance.com.au

TRAILING PROFITS - The Trailing Take Profit or TTP, in short, is a feature that designed to help you catch the rise. You set your Take Profit target on which trailing will activate and try to increase your profits as much as possible. The drawback that you can lose a part of the gain if the price does a reversal and go down just after trailing activation.

Sell Methods

☐ Take Profit
 OR
 ☒ Trailing Profit

Trigger Value(%)

Deviation (%)

You can have the trailing feature enabled with the trigger and deviation percentage of your choice. What will the system do with these settings? When the price reaches your set trigger percentage it will activate the trailing. From this point, it will follow the price until it starts dropping. When the price goes down the system will sell coins when the price drops from the latest high more than deviation percentage.

Ex – If the trigger value set as 3% then the trailing will start when the coin hits 3% and more. If you set the deviation to 2%, then once the coin is goes down the system will identify the movement and will sell coins when the 2% limit reached.

Once the trailing sell done your records shows like this.

STOP LOSS - Stop Loss is a trading bid which is placed to Sell or Buy a particular trade only when a price reaches a specified level. You can understand more clearly by the given below image.

2020-02-16 23:52:43	ALCOBTC	0.00003448	58.000	1.40%	-1.51%	0.00003482	12.000	FILLED	1.0	2020-02-16 23:52:43
Stop Loss Sell - LOSS: -2.07										
Stop Loss Sell - LOSS: -2.07										
Stop Loss Sell - LOSS: -2.07										

Stop loss can be put in the situation when you are uncertain about the market and need to sell your coins at the price if the coin dumps or you need to buy if the coin sudden pumps.

Let's imagine that you bought "xyz" coin at 700 satoshi. Now the price went up and surge to 1200 Satoshi. Now you have 2 choices, either you sell it now and take profit or you wait until it goes higher, so you can take max profit. But how can you secure your profit at the current stage? This is where a Stop Loss is used, you can set Stop limit of "1000 Stop" this means only active your sell order once the price drops to 1000 satoshi.

ADVANTAGE OF USING STOP LOSS

- Can be used to protect the loss.
- You can raise stop-loss every time the price goes up to book more and more profit.
- Helps monitor multiple deals
- Allows you to decide what amount you are willing to risk

BCE HAS INCLUDED DIFFERENT COLOR BUTTONS for you to identify when to sell and each color has its own assigned purpose.

BLUE – MARKET SELL ALL – If you click the blue button, it will instantly sell at market.

Sell All "Medium & Long Term Signals" Open Orders

RED – “SELL NOW” - you can sell your order either on a break even or at a loss
